Quick Start

```
#import "@preview/textcase:0.1.0": contextual

// Sentence case text.
#contextual.sentence-case("sentence case text.")

// Sentence case title: Subtitle
#contextual.sentence-case-title("sentence case title:
subtitle")

// Title Case: Subtitle
#contextual.title-case("title case: subtitle")
```

Description

This project is an unofficial implementation of the *textcase*¹ crate, and its developers have no affiliation with it.

Multilingual sentence and title recasing for Latin-script languages. This recases text whose capitalization is wrong or missing — lowercase feeds, SHOUTED titles, Title Cased Prose — while preserving capitalization that carries information. It works without any external data.

This package aims to implement an API that closely mirrors the original crate while adhering to Typst's coding standards. An additional `#title-case` command is also provided for convenience.

Sentence case

```
#sentence-case(
  text,
  locale: "en",
)
```

Transforms texts to conform to sentence capitalization rules.

¹<https://crates.io/crates/textcase>

text string

Text to be transformed.

locale: string

Language for capitalization rules.

The `#contextual.sentence-case` command automatically retrieve the locale from `#text.lang`.

Sentence case title

```
#sentence-case-title(
  text,
  locale: "en",
)
```

Transforms title texts to conform to sentence capitalization rules, with automatic subtitle detection and capitalization.

text string

Text to be trabsformed.

locale: string

Language for capitalization rules.

The `#contextual.sentence-case-title` command automatically retrieve the locale from `#text.lang`.

Convert text case

```
#convert(
  text,
  locale: "en",
  mode: "sentence",
  subtitle-separator-style: "preserve",
  capitalize-after-subtitle-separator: true,
  preserve-acronyms: true,
  preserve-mixed-case: true,
  preserve-known-proper-nouns: true,
  preserve-existing-capitals: true,
```

```

    normalize-whitespace: true,
    german-mode: "conservative",
)

```

Performs text case transformation with support for fine-tuning the process. This command provides access to advanced text transformation options.

text string

Text to be transformed.

locale: string

Language for capitalization rules.

mode: string

Text conversion mode: "sentence", "sentence-title", "title".

subtitle-separator-style: string

Subtitle separator conversion: "preserve", "colon-space", "space-dash-space", "em-dash-space".

capitalize-after-subtitle-separator: boolean

Whether to capitalize subtitles.

preserve-acronyms: boolean

Preserve upper case acronyms.

preserve-mixed-case: boolean

Preserve mixed case (lower and upper case) as is.

preserve-known-proper-nouns: boolean

Preserve proper nouns known by *textcase*.

preserve-existing-capitals: boolean

Preserve capitalized mid-sentence words in sentence case.

normalize-whitespace: boolean

Collapse additional whitespace characters.

german-mode: boolean

Special handling for German language: "conservative", "balanced", "aggressive".

The `#contextual.convert` command automatically retrieve the locale from `#text.lang`.

Title case

```
#title-case(  
  text,  
  locale: "en",  
)
```

Transforms title texts to conform to title case capitalization rules, with automatic subtitle detection and capitalization. This is an additional command provided for better semantics and convenience.

text string

Text to be transformed.

locale: string

Language for capitalization rules.

The `#contextual.text-case` command automatically retrieve the locale from `#text.lang`.
